

Otis' Tip of the Month

Dig into a new conservation tip every month!

TWO SIDES = BETTER AIR

Just by using two sides of a sheet of paper, you can save lots of trees. Trees help clean the air and give off oxygen that we breathe. You can also cut down on carbon emissions. In fact, carbon emissions are cut by over 2 pounds for every pound of paper you save. So flip it over and scribble some more!

Monkey says, "What are carbon emissions?"

"Not a good thing. Using fossil fuels such as oil and gas, and burning fuel for electricity, give off a gas called carbon dioxide. Too much carbon dioxide in the air traps heat all around the earth. This is bad for everything that lives on our planet."
